List Userials Sugaranteed Content of Medicine Content Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 19, 2002 this sequence version replaced gi:23665344.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entiraly of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        113609: contig of 113609 bp in length

Submitted (05-APR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: hunquery@sanger.ac.uk Clone requests: clonereques@sanger.ac.uk

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeates; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw; SWISSPROT; Tr:, TREMBL; WP: WORNUEP; Information on the WORNPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. IMPORTANT: This sequence is not the entire insert of clone RP11-12C17 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP11-12C17 is at 63011 in this sequence. The true left end of clone GS1-11815 is at 33117 in this sequence. The true right end of clone RP11-67L3 is at 100 in this
RP11-12C17 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      * NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequencing vector: plasmid; 100% Chemistry: Dye-primer ET; 0% of reads Chemistry: Dye-primer ET; 0% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319 Consensus quality: 201546 bases at least Q40 Consensus quality: 202453 bases at least Q30 consensus quality: 20288 bases at least Q30 consensus quality: 20288 bases at least Q20 lnsert size: 229000; agarose-fp lnsert size: 229000; agarose-fp Quality coverage: 17.08 in Q20 bases; sum-of-contigs Quality coverage: 11.09 in Q20 bases; sum-of-contigs

```

# Center project name: M\_BA0328L01

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as Compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest. This sequence was finished as follows unless otherwise noted:

MAPPING INFORMATION: Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (http://www.chori.org) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone. This clone is overlapped by AC114820 and AC121874.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-etranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

BEN: SMISSPROT; Tr:, TREMBL; Wp:, WORMFEP; Information on the WORMFEP database can be found at the WORMFEP database can be found at beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' further information see http://www/Projects/D rerio/fishmask.shtml

invention

This invention describes a novel DNA sequence (I) representing a promoter region having part or all of a specific base sequence. The invention also describes (1) a vector containing (I); (2) a cell transformed by the above vector; and (3) protein produced using (I). (I) is useful for screening and isolating proteins (especially transcription factors). AAA71434-A71469 represent PCR primers used in the method described in the

This invention describes a novel DNA sequence (I) representing a promoter region having part or all of a specific base sequence. The invention also describes (1) a vector containing (I); (2) a cell transformed by the above vector; and (3) protein produced using (I). (I) is useful for screening and isolating proteins (especially transcription factors). This sequence represents a fragment of the human megsin promoter which is described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel DNA sequence (I) representing a promoter region having part or all of a specific base sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel DNA sequence (I) representing a promoter region having part or all of a specific base sequence. The invention also describes (1) a vector containing \{1\}; \{2\} a cell transformed by the above vector; and (3) protein produced using \{1\}. (1) is useful for screening and isolating proteins (especially transcription factors). This sequence represents the human megsin promoter which is described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

The sequences can be used in the disgnosis and treatment of immune system discorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheijepsy, neurofibromatosis, rheumatcoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
above vector, and (3) protein produced using (1). (1) is useful for screening and isolating proteins (especially transcription factors).
AAA/1434-A71469 represent PCR primers used in the method described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antiarteriosclerotic; antianaemic; cytostatic; nootropic; neuroprotective; anti-HIV; anticonvulsant; ophthalmological; antirhematic; antiarthritic; antidiabetic; antipsoriatic; antiartisoriatic; antiinflammatcry; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     chemically modified gene, useful^{\dagger} for associated with abnormal cytosine

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 34967; 3071pp + Sequence Listing; English.

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

          ô
protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-darived cells. AAK64703 to AAK67694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-AUG-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-AUG-2000;
                                                                                                                                                                                                                                                                                                   09-AUG-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-AUG-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-AUG-2000
                                                           AAK80159;
                                          AAXE4951 to AAXE4702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polymucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient, s genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
complyancieotides may be used to produce the secreted (I), by inserting the
mucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polymucleotides may be used to prevent,
cancers and cancer metastases of haematopoietic-derived cells. AAX64703
cc diagnose and treat immune/haematopoietic-derived cells. AAX64703
cc diagnose and treat immune/haematopoietic-derived cells. AAX64703
cc AAX87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAX64912 to AAX64950 and AAM82169
cc represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

AAX54951 to AAX64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
c activity, and can be used in gene therapy and vaccine production. (I)
c proteins and polynucleotides may be used in the prevention, diagnosis and
c treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
ct that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
c supplement the patients own production of (I). Additionally, (I)
c protein. (I) proteins and polynucleotides may be used to prevent,
c nucleic acids into a host cell and culturing the cell to express the
c protein. (I) proteins and polynucleotides may be used to prevent,
c ancers and cranter memune/haematopoietic-related diseases, especially
c cancers and cancer metastases of haematopoietic-derived cells. AAX64703
c to AAX87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAX54912 to AAX54950 and AAM82169
cc represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                     Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hybridisation assay; genetic mapping; gene expression control; protein identification; signal transduction pathway; metabolic pathway; promoter; termination sequence; ss.

                                                                                           The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 compatises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an unlinfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
 얺
pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating a warm-blooded vertebrate animal having a medical condition, e.g. Alzheimer's disease, atherosclerosis, myelofibrosis or glomerulosclerosis, comprises administering a plasminogen activator

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of cDNA encoding mouse plasminogen activator inhibitor-1 (PAL-1). The PAI-1 gene can be used to produce transgenic animals of the invention, useful for screening potential PAI-1 inhibitors can be used to treat a warm-blooded vertebrate animal having a medical condition, e.g. alopecia, undesired vertebrate animal having a medical condition, e.g. alopecia, undesired captain loss, Alzheimer's disease, systemic amyloidosis, myelofibrosis, glomerulosclerosis, male pattern baldness, keloids, apocrine cysts, atherosclerosis, ageing, or a wound (claimed). A method of testing a candidate composition for PAI-1 inhibition activity comprises administering the composition to a transgenic animal having a PAI-1 gene incorporated into its genome, and observing an ameliorating change in the improvement of a vascular thrombotic disorder, asthma, chronic obstructive pulmonary disease, alopecia, undesired weight loss such as animal disciplination of pair animal captain deposition, systemic animal captain animal capta

The present sequence is that of cDNA encoding mouse plasminogen activator inhibitor-1 (PAI-1). The PAI-1 gene can be used to produce transgenic animals of the invention, useful for screening potential PAI-1 inhibitors can be used to treat a warm-blooded vertebrate animal having a medical condition, e.g. alopecia, undesired weight loss, Alzheimer's disease, systemic amyloidosis, myelofibrosis, atherosclerosis, ageing, male pattern baldness, keloids, apocrine cysts, acne, atherosclerosis, ageing, or a wound (claimed). A method of testing a therosclerosis ageing to a composition to a transgenic animal having a PAI-1 gene incorporated into its genome, and observing an amellorating change in the animal indicative of inhibition of PAI-1 activity, the change being an impal indicative of inhibition of PAI-1 activity, the change being an impal indicative of inhibition of PAI-1 activity, the change being an impal indicative of inhibition and activity, the change being an indicative pulmonary disease, alopecia, undesired weight loss such as anorexia, Alzheimer's disease, systemic amyloid deposition, systemic ampliants, myelofibrosis, glomerulosclerosis, male pattern baldness,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention relates to a novel method of predicting at least one toxic effect of a compound. The method comprises a gene expression profile of a cissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the renal toxicity of a compound, or identifying toxicity markers in tissues or toxicity of a compound, or identifying toxicity markers in tissues or cells exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polymucleotide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property
                                                                                                                                                                                                                                                              Predicting at least one toxic effect of a compound, useful for toxicity modeling, comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression

```
The present sequence is that of cDNA encoding rat plasminogen activator inhibitor-1 (PAI-1). The PAI-1 gene can be used to produce transgenic animals of the invention, useful for screening potential PAI-1 inhibitors as but PAI-1 inhibitors can be used to treat a warm-blooded vertebrate animal having a medical condition, e.g. alopecia, undesired vertebrate animal having a medical condition, e.g. alopecia, undesired to vertebrate animal having a medical condition, e.g. alopecia, undesired to alomerulosclerosis, male pattern baldness, Reloids, apocrine cysts, acne, atherosclerosis, ageing, or a wound (claimed). A method of testing a candidate composition for PAI-1 inhibition arminal having a PAI-1 gene incorporated into its genome, and observing an ameliorating change in the inforative of inhibition of PAI-1 activity, the change being an improvement of a vascular thrombotic disorder, asthma, chronic obstructive pulmonary disease, alopecia, undesired weight loss such as anorexia, Alzheimer's disease, alopecia, undesired weight loss such as anorexia, Alzheimer's disease, systemic amyloid deposition, systemic amyloidosis, myelofibrosis, glomerulosclerosis, male pattern baldness, keloids, apocrine cysts, acne, atherosclerosis, or a wound (claimed) hepatosplenomegaly, extramedullary haematopoiesis, or a wound (claimed)
                                                                                                                                                                                                                              Treating a warm-blooded vertebrate animal having a medical condition, e.g. Alzheimer's disease, atherosclerosis, myelofibrosis or glomerulosclerosis, comprises administering a plasminogen activator inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

4 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The CDNAs were ligated to Lone linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-5. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with Sal1 and Not1 enzymes and cloned into Sal1/Not1 site of pSPORT1 plasmid vector. The DH10B E. coli host was transformed with the ligation maxture by the standard chemical method. The average insert size is about 2.6 kb. The library was constructed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gow/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were obtained from Dr. Janet Rossant and Tilo Kunath (Samuel Lunenfeld Research Institute, Canada). Double-stranded codna were synthesized with an Oligo(dT) primer
